

OV READY COMPLIANCE PROGRAM

A formal set of standards to maximize OV Ready benefits and advantages

The OV Ready Compliance Program establishes formal criteria to validate device and application compliance to the OV Ready protocol. This provides OV Ready partners with clear and attainable objectives for their OV Ready development; enables clear communications amongst device and application partners as to features supported; and applies equal measures for all partners to achieve OV Ready compliance status.

COMPLIANCE LEVELS

Compliance with OV Ready will apply specifically to OEM devices and partner applications. Two levels of compliance—EVENTS and PREMIER—are achievable for both devices and applications. EVENTS compliance demonstrates compliant support of ObjectVideo event output. PREMIER compliance indicates support of the full OV Ready specification, including rule and configuration management, in addition to event output. The detailed requirements to achieve the two compliance levels are communicated to all OV Ready partners. A third designation—DATA—is coupled with the EVENTS and PREMIER compliance levels to indicate those devices and applications that also support metadata handling.

ACHIEVING COMPLIANCE

Device and application partners use test tools provided by ObjectVideo to determine their compliance levels. The output of these tools is sent to ObjectVideo for validation. Once approved, the status level of that partner authorizes them to use the applicable OV Ready compliance logo within applications, and on device and application marketing collateral.

| | | |
|---|-------------|---|
|  | DEVICE | : An OV Ready EVENTS compliant device follows the OV Ready protocol for exposing its event outputs. |
| | APPLICATION | : An OV Ready EVENTS compliant application follows the OV Ready protocol for receiving and displaying events. |
|  | DEVICE | : An OV Ready PREMIER compliant device follows the OV Ready protocol for exposing its event outputs <i>and</i> accepting rule configuration. |
| | APPLICATION | : An OV Ready PREMIER compliant application follows the OV Ready protocol for defining and configuring rules <i>and</i> displaying event output. |
